## Cancer treatment

By the grace of God, a cure for cancer and malignant tumors was found, a cure for all types of cancer, and from the first week, excellent results were achieved with the use of chemotherapy because the cause of cancer is the same and the treatment eradicates cancer from the source of its cause. The treatment has succeeded in

curing various types of cancer because cancer is like rebellion. And the revolution that arises in the body and the cells transform from normal cells to abnormal cells that act on other than the general body system and the body system like the state system on Everyone follows him, but the cancer cell carries out a rebellion against the body system and a revolution against the public order and chemotherapy, such as that the state suppresses protesters and kills them, and chemotherapy often fails to kill all cancer cells and the cancer returns after a while and may spread to more than one place or it does not respond to chemotherapy and does not affect In it, the solution is to respond to the demands of the revolutionaries and to provide the needs of the cells, thus stopping their growth and returning to their normal work and cancer is formed when the cell divides needs Providing blood to transport food and oxygen to it to carry out its normal work, and in some cases this is not done and the blood does not reach the cell, so it turns into a cancer cell and begins a revolution in the neighboring cells and multiplies abnormally, forming a cancerous tumor and for this it was impossible to have a cure for all types of cancer in the past because Chemical treatments used to treat the symptoms of disease and types of cancers, which are more than 200 types and develop in resistance to chemical doses. As for our treatment, it treats the cause of the cancer disease and solves the problem from its foundations with excellent results with the use of chemotherapy and for all types of cancer, provided that the patient is still able to take the course of treatment.

## Cancer treatment course.

His guidance in the course of cancer treatment.

## **-Composition.**

Dracon is made from a rare natural medicinal herbal extract and is free from any chemicals.

## **-Method of treatment.**

The treatment is based on the theory that cancer arises due to weakness in the heart and the force of blood drawing from cells and when cells divide and lack of food access to cells, the cell genes change and the treatment works in four stages.

First: Considering the disease as a genetic defect that affects the cell, so it issues the command to produce and multiply cancer cells, so the treatment corrects the cells' genetic mutation and stops the production and proliferation of cancer cells.

Second: Trapping these cells and not allowing them to transmit the virus to other places. The cells have the ability to move through the bloodstream and stimulate normal cells to turn into active and permanent cancer cells.

Third: Destroying the tumor and penetrating the center of the tumor while maintaining the resistance to forming cancer cells and inhibiting the emergence of tumors and then penetrating the tumor and destroying the cancer cells with strong herbs that contain strong substances that kill cancer cells and it is believed that their effect on normal cells is less than their effect on cancer cells, unlike chemical doses, so their effect on normal cells is stronger From its effect on cancer cells, the chemo destroys normal cells by weakening what destroys cancer cells.

Fourth: After that, it needs to quickly remove sediments, cell remnants and rotting cancerous tumors so that the disease does not return, and there are strong antioxidant, anti-inflammatory and eliminating herbs.

## **-Usage and dosage.**

The treatment dose is (3) boxes in each box (160) capsules to be used for three months.

### **the use .**

Adults over the age of 10 years.

The normal dose, in the event of the onset of the disease, in one place in the body and without spreading to other places.

One capsule half an hour before eating and one capsule three times a day after eating half an hour. The total number of capsules per day is (6) capsules.

The double dose is in the case of illness for more than six months, or in more than one place in the body or in a place that poses a danger to the body, such as the brain or stomach.

Two capsules half an hour before eating and two capsules half an hour after eating three times a day. The total number of capsules per day is (12) capsules.

## **-Children are older than 3 years.**

Normal dose in case of onset of disease and in one place in the body and without spread to other places Capsule one before eating half an hour 3 times a day total capsules 3 capsules.

Double dose in case of illness more than one year or more than anywhere in the body or in a place that is dangerous to the body such as the brain capsule one before eating half an hour and capsule after eating half an hour the total number of capsules per day 6 capsules and no objection to opening capsules and mixing their content With juice for the baby to drink.

## **-Children under 3 years old**

Half the content of capsule before eating half a day Mix on water or juice to drink this child in the disease and in one place the total use of the half.

In the case of illness more than one place or anywhere or the place of danger Half of the contents of capsule before eating half an hour and a half capsule capsule half an hour three times a day Total number of capsules a day.

## **-Side effects.**

There are no side effects in the long run. Frack natural substances and free of chemicals.

In the near term, in some cases, different symptoms nausea, diarrhea, gastrointestinal disorders, hives may result.

The patient should use a medication to stop vomiting in order to take full advantage of the treatment prohibited to use tranquilizers for pain in case of

## **-Additive medicines.**

- 1- (Glodav 1g) is made with potassium acid.
- 2- Folvyte 400 micrograms.
- 3- Haem UP.

## **-Use of added medicines.**

One pill from the first, one from the second and one third after eating three times a day.

## **-Alert.**

Although treatment is enriching, there is no need for chemotherapy with treatment.

Also, treatment is not considered a substitute for surgical intervention to remove large tumors, but rather to increase the speed of healing and recovery from the disease. The patient must eat well and with various types of fruits and more fruits and vegetables.

After using the doses for a period of three months, the patient must undergo tests and rumors to make sure the disease is ended, and in the case of large tumors, it may take three months to completely cure the disease.

## The main types of cancer:

Leukemia leukemia.

breast cancer .

brain cancer .

Lung Cancer .

Liver Cancer .

Pancreas cancer .

Colon Cancer .

stomach cancer .

ovarian cancer .

Bladder Cancer .

Cervical cancer .

Rectal cancer.

Kidney cancer.

mouth cancer .

Oesophageal cancer.

Throat cancer.

Cancer is made up of cells within cells that are the basic elements that make up tissues, and tissues are that make up the body's organs

Cells grow normally and divide to form new cells whenever the body needs them, and as cells age they die, and new cells take their place.

And sometimes, a disorder occurs in that organizing process, so new cells are formed while the body does not need them, and old cells die at the appointed time of their death.

These extra cells may be a group of tissues called an enlargement or tumor.

Tumors are either benign or malignant.

Polyps are not cancer: Benign tumors are rarely life-threatening.

Benign tumors usually can be removed, often without returning. Benign tumor cells that attack the surrounding tissues. Benign tumor cells that spread to infect other parts of the body.

As for malignant tumors, they are cancer: – Malignant tumors are usually more dangerous than benign tumors, as they may endanger life.

Malignant tumors can often be removed, but sometimes they come back.

Some cells of the malignant tumors may attack and damage nearby tissues and organs.

Some malignant tumor cells may spread to affect other parts of the body. Cancer cells spread by breaking away from the primary tumor and entering the bloodstream or lymphatic system (Lymphatic System) Its cells may attack other organs, creating new tumors that damage those organs. The spread of cancer is called metastatic cancer (metastasis).

And most types of cancer are named where they start. Lung cancer, for example, begins in the lung, and breast cancer begins in the breast. Lymphoma begins in the lymphatic system, and leukemia begins in the white blood cells (leukocytes).

When the cancer spreads and a new tumor is inside another part of the body, the new tumor has the same invasive cell type and the same name as the primary tumor. If prostate cancer spreads and moves to the bones, for example, then the cancer cells in the bones are actually prostate cancer cells.

The disease becomes common prostate cancer, not bone cancer. Sometimes doctors call the new tumor metastatic or “metastatic” disease.

**Risk Factors** Doctors often cannot explain why one person has cancer and not another. However, research shows that there are certain risk factors that increase a person’s chances of developing cancer.

Here are the most common cancer risk factors:

- aging • tobacco • sunlight • radiation Ionizing • some chemicals • some viruses and bacteria (bacteria and viruses) • certain hormones • family history (heredity) • alcohol • malnutrition • lack of physical activity • being overweight Avoid many of these factors, while other factors such as family history cannot be avoided

People can protect themselves from disease by avoiding known risk factors whenever possible.

If you think you are at risk of developing cancer, you should discuss this matter with your doctor.

You may want to ask him about how to reduce the risk, and about the schedule of medical exams.

Over time, several factors may work together in order to convert normal cells into cancer cells.

When considering your risk of developing cancer, Here are some things you should take into consideration:

Not everything causes cancer. Cancer is not caused by an injury, such as a wound or a bruise. Cancer is not an infectious disease. Although the transmission of some viruses or bacteria may increase the risk of developing some types of cancer, it is not possible for a person to “catch” cancer from another person.

- Having one or more risk factors for you does not necessarily mean that you will develop the disease, as most of those who have risk factors have never had the disease. Some people are more sensitive than others to known risk factors.
